How can I see where the user is right now?

Mari Opstad - 2026-02-11 - Comments (0) - Using the Care Tracker

How can I see where the user is right now?

In short:

You can see the watch's location directly in the **Care Tracker app**.

When you activate **Find GPS**, a map appears showing the watch's real-time position.

Here's how:

1. Open the **Care Tracker app**.
2. Select the watch you want to view.
3. Tap **Find GPS**.
   The map will open automatically, showing the watch's location.
   The watch sends its position every **15 seconds**, allowing you to follow the movement live.
4. When you're done, close **Find GPS** again.
   The watch will automatically return to normal updates every **10 minutes** to save battery.

Tip:

- You can zoom in on the map and tap the marker to see the exact address.
- Check the timestamp at the bottom of the screen to see when the location was last updated.

Note:

If the watch is shown as *offline*, the map will not appear until the connection is restored.
