## How can I share tracking access with other relatives?

### In short:

You can give other relatives access to follow the watch in the **Care Tracker app**. This makes it easy for multiple family members to stay informed and help ensure the user's safety.

### Here's how:

1. Open the **Care Tracker app**.
2. Select the watch you want to share access to, and tap **Settings**.
3. Choose **Alarmreceivers**.
4. Tap **Add alarmreceiver**.
5. Enter the **name, phone number, and email address** of the person you want to grant access to.  
The person will receive an email with a link to create their account in the Care Tracker app.
6. Once the new user has registered, they'll be able to see the watch's location and receive alerts just like you.

### Tip:

You can remove or change access at any time under **Alarmreceivers**.

### Note:

Only the people you actively add as alert recipients can view the watch's location and receive notifications. No one else has access to this information.
