Change Language in the System

This guide explains how to switch between Danish and English in **Stella Care's Administration System**.

How to change the language

1. **Log in** to the Administration System.
2. In the top bar (at the top of the page), find the **menu** displaying your username.
3. Click the **language setting** next to your name.
4. **Select your preferred language** from the drop-down menu:
    1. Danish
    2. English
5. The system will automatically update to the selected language.

Note

- Your language preference is saved automatically for the next time you log in.
- The language setting only affects your personal view – it does not change other users' settings.
- If the text doesn't update after changing the language, refresh the page (Ctrl + R or Cmd + R).
