## Set notification for step deviation

This guide explains how to set up alerts for deviations in a citizen's step level. This is done in the Administration System.

### How to set up a deviation notification

1. Go to Citizens and select the relevant citizen.
2. Go to Health.
3. Click "Set notification for step deviation."
4. Choose the deviation percentage:
  1. 20%
  2. 40%
  3. 60%
5. Choose whether you want to be notified when the step level is:
  1. Below
  2. Above
  3. Below and/or above
6. Save the change.

### Tips

- Use a lower percentage for citizens with a stable activity level.
- Use a higher percentage for citizens with natural fluctuations.
- Monitor alerts regularly to avoid unnecessary notifications.
