Understanding the Dashboard – Overview of Devices and Status

This guide helps you understand how the Dashboard in Stella Care's [Administration System](#) works, and how to use it to get a quick overview of device status.

What is the Dashboard?

The Dashboard is the home page of the Administration System.

Here, you get a complete overview of your department's GPS devices and their current status.

It's the first place to check whether everything is functioning as it should.

Dashboard structure

- **Search field**
  Use the search field to quickly find a specific device. You can search by name, ID, or citizen.

- **Device table**
  The table displays a list of all GPS devices in your department. The columns show:

  - Name or ID: The device's name or identification number.

  - Citizen: The citizen the device is assigned to.

  - Status: A color code showing the device's current state (see below).

  - Last seen: When the device last reported its position.

  - Battery: Displays the device's current battery level.

- **Map view**
  The map shows all your department's devices and their current locations. You can click a device on the map to view details such as address and last reported position.

- **Subscription status**
  Shows how many devices are active, paused, or without an active subscription.

Status colors and their meanings

 Green: The device is functioning normally.

 Yellow: The device has a low battery.

 Red: A geofence alarm has been triggered.

 Grey: The device has no network connection.

Tips

- Use the Dashboard as your daily overview to quickly identify any issues.

- Click a device in the table to go directly to its details or the associated citizen's page.

- If the map doesn't display devices correctly, refresh the page or check if filtering is enabled.
